Abstract:

Mangalyaan 2 is an Indian crewed orbital Spacecraft mission of INDIA. Mangalyaan means mars craft. This satellite will be used to find the living form on mars surface. The superpowers are fighting for space projects. India wants to join this list to explore the universe using the power of science and technology. This article explains the Mangalyan 2 features and budget details.

Mangalyan:

Mangalyaan is a series of missions. We have already sent 1

satellite that's called Mangalyaan 1. Mangalyaan 1 is a Mars orbiting satellite that successfully completed its mission and explored features of mars surface.

Feature of Mangalyaan 2:

The Mangalyan 2 is a second interplanetary mission. Mangalyan 2 will only contain the Mars Orbiter satellite. But many expect the Mars Lander module. In January 2016, India and France jointly signed a letter with ISRO and CNES to develop MOM 2 by 2020, but by April 2018, France was not yet operational.

Budget of Mangalyaan:

The Mangalyan 1 launch vehicle, spacecraft, and ground will cost Rs 450 crore, making it one of the cheapest missions to Mars. The cost of Mangalyan 2 has not been announced yet.

Conclusion:

Future mission based on space exploration. India will achieve space goals.
